

Committed to Customer Service and Sustainability

Many wonder if a distributor can affect the environment. At Industrial Steel and Wire there is no question and we strive to minimize our environmental impact.

We ensure that our suppliers have rigorous environmental control systems that optimize their use of resources and minimize their impact on the local environment.

Internally, we are focused on efficiency and conservation.

- We establish distribution centers close to our customer base to minimize transportation
- We continuously strive to improve the efficiency of our operations:
 - Installation of high efficiency lighting to reduce electrical consumption
 - Utilization of electric material handling equipment to reduce harmful exhausts
 - Warehouse optimization to eliminate excessive movement
- We have taken steps to reduce our contributions to the solid waste stream
 - Recycling of paper/plastics/bottles/cans
 - Recycling of nonconforming materials to be reprocessed or repurposed
 - Elimination of hard copy / paper documentation to conserve paper products

We believe we all have an effect on the environment and Industrial Steel and Wire is working to be more ecofriendly.

We are happy to discuss our efforts! Please contact us so we can help you better understand our stewardship.
